Attention:

Subject: Planning Purpose Proposal for a  
Central Chemical Mixing System

STATINTL

Gentlemen:

In accordance with your verbal request and subsequent discussions, we are pleased to submit this preliminary proposal for design, fabrication, and installation of a Central Chemical Mixing System in the Washington area.

Certain details of this proposed installation, are not yet fully established, for example, the exact floor plan and layout have yet to be determined and other factors which affect the price of this installation are also subject to clarification. Included among these are chemical analysis of the water available at the site, and the extent of micro-filtering which will be required for high-quality processing. Therefore, in the enclosed Technical Discussion, we have pointed out some of the options available for determination, and have endeavored to indicate their relative costs.

With the information presently available, we estimate the cost on a CPFF Planning Purpose basis at [REDACTED]. We shall be pleased to submit to you a formal proposal presenting a detailed cost breakdown on this installation upon the clarification of unresolved items. If you request, the equipment may be proposed on a fixed-price basis. However, we recommend that the installation be proposed on a CPFF, or on a time-and-material basis, in view of the uncertainties outlined above.

DECLASS REVIEW by NIMA/DOD

OWN-136-267

The "Illinois" Water Deionizing-Filtration Plant described in the Technical Discussion may or may not be necessary. Its inclusion will depend on the results of the water analysis now being conducted. Therefore, we are stating it separately at [REDACTED] plus installation.

We contemplate, at this time, that the estimated cost for providing one (1) full time chemist on a yearly basis, will be in the total estimated amount of approximately [REDACTED] a year.

In addition to the Technical Discussion we are including a separate discussion of our background and experience, which so well fulfills the requirements of this program.

We appreciate this opportunity to present these estimates and our technical approach to you, and shall be pleased to discuss this further with your representatives and to submit a formal proposal upon request.

Very truly yours,

STATINTL
